Magic Tricks, Science Facts

Synopsis

A NOTE TO PARENTS AND TEACHERS This book attempts to help children become interested in the study of the sciences while teaching them rudimentary principles. It does this by stripping away some of the mysteries associated with science and technology. Scientific and mathematical principles presented as magic or puzzles have an allure that appeals to many children, even those with marginal scientific interests. This book was written to show children that science and math can be fun and exciting, as well as useful. It will:
• make the pursuit of science a game that children will want to play
• be a useful tool to children, allowing them to learn to express themselves in public through the performance of magic tricks
• help them to develop a knowledge of the psychology of working with people
• by the very nature of the performance, help them to learn to think on their feet

PREFACE When I was a kid, I was very nosy. I always wanted to know how and why things worked. What were their secrets? I'd constantly take things apart to find out what made them tick. Occasionally that would get me into all sorts of trouble, because I couldn't put them back together again. One day I discovered magic and learned that it too had secrets. I wanted to know about those secrets. I studied books, talked to amateur magicians, and bought tricks. I was in heaven. In school we were taught the secrets of physics, chemistry, and biology. To master these secrets, I studied books, talked to my teachers, and experimented in the labs. Heaven again! Today I enjoy combining my two interests. I perform magic on stage and whenever possible include science-based tricks in my act. The secrets of magic and science are very old, and the number of new tricks that can be invented using these principles is practically limitless. I hope that you enjoy learning these scientific magic tricks, and their secrets, as much as I've enjoyed putting them together for you. Bob Friedhoffer aka The Madman of Magic

Book Information

Paperback: 112 pages

Publisher: CreateSpace Independent Publishing Platform (April 3, 2013)

Language: English

ISBN-10: 1484027663

ISBN-13: 978-1484027660

Customer Reviews

Grade 6 - 8 --The close links between magic and science are explored in this well-done, easily understood book. The physics tricks deal with subjects such as force, friction, gravity, and magnetism. The chemistry stunts are prefaced with a warning to use extreme caution and adult assistance. Some of the math tricks use cards; others feature mental magic. The physiology examples use the amazing mechanics of the body to perform the feats. The explanation of each magic trick consists of five parts: effect, routine, props, method, and note, making it simple to put together a whole performance. Effect explains what the audience thinks happens; routine explains pattern and movement to accompany the trick; props outlines the items required for the trick; method combines the first three with instructions to execute the performance; and note contains more information on why or how a trick works (the science part). Friedhoffer obviously enjoys what he is doing and explains it in a lucid and entertaining manner. Similar to McGill's *Science Magic : 101 Experiments You Can Do* (Arco, 1984), this features more performance tips and clearer explanations and warnings. A good nonfiction booktalk choice. --Kathryn Havris, Mesa Public Library, AZCopyright 1990 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.
