ea. vol: photogs. by Chris Fairclough. unpaged. (Knowabout Series). Watts. 1988. PLB \$9.90.

PreSchool-Grade 2 This series is intended to draw youngsters and adults into conversation directed toward understanding mathematically-related concepts. Vibrantly colored photographs of familiar objects combine with informative text and related questions to encourage active shared participation. Concepts such as balance, comparative amounts, and relative time are communicated clearly. Fairclough's photography is integral to the success of the series. The counting book is not unique in that other beginning books on counting also depend on child-adult interaction. For example, *Ten What?* (Scribners, 1974) by Russell Hoban and *Anno's Counting Book* (Crowell, 1977) could lead to shared activities; both offer opportunities for adults to guide youngsters toward understanding of the concepts. However, the other three books are unique in their approach. They deal with abstract concepts, so there is an obvious need for adult guidance. In all four books, the blend of text, leading questions, and photography results in worthwhile additions to collections for

this targeted young audience. Renee Steinberg, Fieldstone Middle School, Montvale, N.J. Copyright 1988 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

Love easy learning for kids

A little hard to follow, but it has some interesting pictures of things of different sizes.

We only received 12 of the 13 we ordered on this order. When should we expect the final book? Thank you! Jamie Barrick [jbarric@purdue.edu](mailto:jbarric@purdue.edu)

My students liked this book

Love the book.

The Math Counts series is wonderful. Beautiful photos and a wonderful addition to my classroom library.

I like the content of the book. It has great pictures. I wish that the book was larger. When reading to a large group of Kindergarten students, it is hard to see.

Good book for introducing weight...even to young learners.
