Rocket Boys: The Coalwood Series, Book 1

Synopsis

The New York Times best-selling memoir that inspired the film *October Sky*, *Rocket Boys* is a uniquely American memoir - a powerful, luminous story of coming of age at the dawn of the 1960s, of a mother's love and a father's fears, of a group of young men who dreamed of launching rockets into outer space... and who made those dreams come true. Nominated for the National Book Critics Circle Award, Homer Hickam's lush, lyrical memoir is a marvelously entertaining chronicle of triumph.

Book Information

Audible Audio Edition

Listening Length: 13 hours 38 minutes

Program Type: Audiobook

Version: Unabridged

Publisher: Simon & Schuster Audio

Audible.com Release Date: May 6, 2011

Whispersync for Voice: Ready

Language: English

ASIN: B004ZN7WBI

Best Sellers Rank: #75 in Books > Parenting & Relationships > Parenting > Parenting Boys
#95 in Books > Engineering & Transportation > Engineering > Aerospace #96 in Books > Science & Math > Astronomy & Space Science > Aeronautics & Astronautics

Customer Reviews

Starts off slow and picks up. Nostalgic with a tiny bit of math and science. I personally enjoyed the success story of the boys whom people didn't expect much from. Especially Homer, whom was mocked for struggling with Algebra and went on to be a NASA engineer. The book paints just how crucially important and influential teachers are, as well as receiving support from somewhere so that life doesn't end up crushing young people's dreams. I learned a great deal about West Virginia during that time period, and how the space race impacted life in Homer's little town. Overall I would recommend.

As a reviewer for the San Antonio Express-News, I got the advance copy of this book a few weeks ago. I put it aside in order to finish a few other projects. About a week ago, I picked it up before going to bed after a late evening, intending to read it until I fell asleep. At 7:30 the next morning, I

closed the book after finishing it. Oh, I tried to put it down a few times, but I finally gave it up and decided to finish it. I enjoyed it immensely, although I think it could have been a little less pretentious in spots. It almost seemed like "Revenge of the Nerds" in places. However, a very strong story very reminiscent of Beverly Cleary's "Henry Huggins" stories. Should make an interesting movie, provided they concentrate on the personal triumphs and not try to turn it into a "90210" episode. A keeper.

Homer Hadley Hickam. Junior. If ever there was a name that suggested either a captain of industry or a boy steeped in science, this is it. A little of both, I'd say. The story starts in a West Virginia town named Coalwood, and takes the reader into the home of the Hickams. All the elements of a good story are found within. The time period is set early on - a 50's nuclear family in a mining town; dad has modern day problems - he must be available to the mine around the clock. Mom dreams of a life far from Coalwood along a beach in North Carolina as witnessed by her ongoing painting of a seaside landscape. I was touched by the mother's resolve to get through her day to day in Coalwood, in part because of the view she'd created for herself in her artwork. Brilliant. As described by the author, she's a strong woman determined to raise and prepare her sons to get a good education and a job that doesn't involve the brutal realities of mining. Two adolescent boys vie for their father's attention; one son's the high school football star, Jim, who's assured he has his father's solid interest, while the younger son, a kid swept up by rocket science, rarely captures his father's attention. The end of the story was made more satisfying because, after trying time and again to gain his father's interest, Sonny, finally does so as he's approaching his college years and his father's pushing towards the end of his career at the mines. The family dynamic - scrappy and straightforward, had universal themes for the reader to consider and Sonny's spirit had me cheering as he worked hard to improve his rocket-launches, built his boyhood friendships in a team of sorts, and made connections with scientists and educators beyond the world he knew well in Coalwood. I found Sonny a fearless, strong leader of his intrepid "rocket boys" who kept at his dreams even though, as a group and as individuals, they suffered failures along the way, both personal and professional - the science fair was a huge opportunity for them. Hickam played the right notes when describing the high school scene; the student's drowsy morning starts along a harrowing route, the tippy toeing around the girl/boy interests, the fights that surfaced between brothers and players, and the studied, thoughtful way the young boys applied themselves to making rockets that actually flew. It's a riveting story with opening scenes focused on the family, good tension builds as Homer (Sonny) keeps at his project while navigating high school life and in

the end, it was gratifying to discover that the old adage, "hard work pays off" served the Big Creek Missile Agency (BCMA) delivering the attention and accolades they deserved. Homer Hadley Hickam, Jr. triumphed in the end and the reader soars right along with those rockets.rocket-building

This is Americana at its best. The reader is propelled into the 1950s, small town America, and the cold war. Readers are immediately find themselves living the life of a teenager in the small town that evolves around the coal mining industry. Here we learn about the students in the high school and workers that risk their lives in the mines. But we also learn that through innovation and a dream, that this everyday student was able to overcome any predestination set up for him by his surroundings. Here he has a dream to build a rocket and does it with the help of his friends and the town. Easy reader, grades 6 on up.

This is a well written book that holds your interest and in my case was a trip down memory lane. I too like many boys raised in the 1950's and 60's was inspired and challenged by the launching of sputnik and like Homer I built rockets beginning where Homer finished with dimensions and power enough to reach altitudes measured in miles. But unlike Homer I had to do this in only a couple iterations because I lacked what Homer had in terms of support at school, home, or community. I had the ability to imagine as Homer did and I was good at Physics and Chemistry. I taught myself a little materials engineering and got a friend that was taking a high school shop class to do the fabrication work from my drawings. We made several successful launches and sent them down range into Lake Ontario. We had a lot of fun and learned a lot but without my getting needed support, especially educational support, I never made it to NASA. I suspect my story is a lot more common than is Homer's as a lot of things clicked in his favor, especially his mother's support paying for college and encouraging his youthful experiments. In the USA it takes a lot of money to get an education. Self study is good but it takes a lot of money to get a credentialed education and I suspect a lot of Homer's like Homer senior or me did not reach our full potential because had that happened maybe Mr. Hickam would be reading my book on rocket designs. I also was only a few feet away from JFK but did not field a question on rockets or education as I would have asked why support going to the moon and do such a poor job supporting low cost state supported higher education the way it is supported in Europe.Sure was fun ... Michael Law

This was a saw the movie and then read the book situation for me. I have to say the book is a very easy read and interesting slice of life in West Virginia as well as in the early days of the space race.
