Customer Reviews

These books give two quite different perspectives on astronomical instrumentation. *Infinite Vistas*, based mostly on a series of public lectures, consists of 11 chapters by professional astronomers on major new astronomical instruments under construction, planned, or hoped for. From radio waves to gamma rays, they cover the full range of the electromagnetic spectrum, summarizing recent progress, detailing planned new equipment, and explaining research problems to be resolved in the future. Individual contributions are well written and fit together unusually well to form a coherent treatise. Given the key role of instrumentation in the dramatic progress of 20th-century astronomy, the volume provides an exciting peek at the next two decades. Readers do not need advanced training to enjoy this work, although some prior knowledge of astronomy and physics might be useful. Berry's book contains detailed instructions for amateurs wishing to construct small optical telescopes. It provides photographs and plans for five specific telescopes: four reflectors of differing sizes and styles and one refractor. Several other chapters explain telescope construction and general use. The author is an experienced constructor of, and writer on, telescopes. Both books are recommended for public and academic libraries. Jack W. Weigel, Univ. of Michigan Library, Ann Arbor Copyright 1986 Reed Business Information, Inc. --This text refers to an alternate Hardcover edition.

This book is a great start on building your own telescope. Later I bought Richard Berry's book (Build your own telescope) which actually has more detail and beautiful illustrations but cost a lot more. I recommend both books.

I am very please with the book. When I received the book I was surprised how nice the book was. It was like brand new. My son was so excited and we can't wait to start building our first telescope. I received my book before it was due to arrive and that made me happy. I will deffinetly buy from this company again.

Excellent book for first time beginners.

Teaches everything. I haven't started building yet, but this book is on my nightstand, teaching me what I need to know.

This is a "must-have" reference work for all ATM's. Mr. Berry is somewhere between Dobson and Texereau defining "Good Enough"!

it also starts with brief explanation and basics of telescope and how it works. if you really want to make your own telescope, you should try this book.

Along with Sam Brown's " All About Telescopes" are the two classic of American telescope making.

Son wants to build his own telescope. This book was an excellent book at used price. Hoping to be able add pictures of his project soon.
