## Customer Reviews

The oil & gas industry is vital to the world's economy and is great industry to be in. Can you imagine a world without energy? I wanted to write a book that would help introduce readers to the fascinating world of oil & gas and cover the upstream, midstream and downstream sectors of the industry. Another reason I wanted to write this book is that there are actually very few business or finance books about the oil & gas industry that cover all the sectors; some books focus on exploration & production, some on pipelines and some on chemicals, but there aren't that many books that cover all sectors from a finance perspective. An additional inspiration was simply to recognize the industry and convey the amount of work it takes to deliver a barrel of oil all the way from exploration to the delivery of fuels at the local service station.

Primary Author - Alfonso Colombano has been carefully studying the oil & gas industry for more than a decade. He has worked for two International Oil Companies (IOCâs) and one refining company as a Finance and Operations Analyst in upstream, midstream and downstream operations. Alfonso is a graduate of the University of Houston where he was active in the Energy Association. Alfonso's expertise encompasses all sectors of the oil & gas industry including upstream, midstream and downstream, which led him to create and write this book. Alfonso is an avid reader of Forms 10-K and 20-F, financial statements and other external company publications. Alfonso's expertise encompasses the financial & operational analysis of oil & gas companies, having developed several analytical models to compare companies, including the one for this book. In addition, Alfonso is a subject matter expert in SAP® ERP and the U.S. natural gas industry. Alfonso enjoys playing golf in his free time. He can be reached by email at [alfonso@oilgascompanyanalysis.com](mailto:alfonso@oilgascompanyanalysis.com) Co-Author - Alberto Colombano Alberto Colombano is an Information Technology professional. He has studied the mining and oil industries since 2005 along

with economic analysis and worldwide monetary policy. He graduated from University of Houston-Downtown with a Bachelor's degree in Computer Information Systems (CIS). He is multilingual (English, Italian, Spanish and German). He and his brother Alfonso read and study companies' financial reports such as 10-K and 20-F forms and other publicly available reports for the investment public. He helped with data processing and conversion by creating some custom applications & utilities.

The book IS just a summary of facts about the Oil & Gas industry, but it explains all the various metrics and KPIs used in the industry and does a great job of explaining how all the various sectors work. Excellent book for someone who wants more insight for investing or possible career in the industry.

great book with a lot of info.

Good analysis

Great book very beneficial for anyone pursuing a career in the energy sector

Good book

The first part is better than the last

Books only provides a summary of financial data for companies analyzed. I was hoping to get insights into companies' strategy, challenges and management style.

Good overview of the business side of the upstream, midstream and downstream sectors. A little challenging at times for someone with limited financial background.
